Question: The bid scope requests that the new piezometer be installed to a similar depth as existing PZ-1. However, the bid materials do not reveal the depth of PZ-1 or if bedrock would be encountered. Please advise on depth of piezometer and bedrock.

Answer: Bedrock has been encountered on the site between 18' and 20' bgs. The piezometer should be screen entirely into bedrock. All bids should be for a boring 26 feet in depth with 7 feet of bedrock drilling.
